

HOW IS THE VIRUS TRANSMITTED?

- **Respiratory droplets** (e.g. from a cough) are the principal mode of spread
- **Close contact with infected individuals** (> 10 min in < 6 feet/ 2 meter distance)
- Contact with **infected surfaces**
- But don't forget that **virus may be present in saliva, stool, and urine**

HOW CAN YOU REDUCE YOUR RISK?

- **Wash your hands**
- **Don't touch your face**
- **Avoid large gatherings**
- Observe social distancing by keeping **2 meters/6 feet from others**
- **Clean the surfaces** where you work or eat

WHAT IS TAKEDA DOING TO REDUCE EMPLOYEE RISK?

- Strongly recommending **telework**
- Social distancing and **limiting meeting size**
- Requiring ill colleagues to **recover at home**
- **Restricting travel**
- Enhancing **facility cleaning**

YOUR RESPONSIBILITY TO OTHERS

- **Stay home** if you are unwell
- **Cover your cough, sneeze** with a tissue, dispose of it and wash your hands OR cough into your arm
- **Wear a mask** if you have respiratory symptoms
- **Don't share** utensils, food, beverages
- **Wash your hands!**
